

Sagrada Família – Gaudí's Unfinished Masterpiece

An exhibition focus on the dual curiosities of the basilica's construction and the incorporation of new technologies into its already magnificent design.

The Bernard and Anne Spitzer School of Architecture at The City College of New York is hosting a once-in-a-lifetime exhibition of La Sagrada Família, the magnum opus of Antoni Gaudí, the father of Catalan Modernisme.

This is the only time that such a demonstration of Gaudí's genius will be featured on American soil. Many institutions have vied for this singular opportunity, and City College is honored to offer this extraordinary experience to New York City. The exhibit includes several architectural models and casts used in construction, and showcases the 3D computer imaging software used to analyze and draw precise tridimensional geometry.

The exhibit *Sagrada Família – Gaudí's Unfinished Masterpiece: Geometry, Construction and Site* is on view in the Atrium Gallery.
