COVID-19: Economic and Social Implications

Mauro F. Guillén

Presentation

- Background and Economic Impact.
- When and How of the Recovery.
- Longer-Term Implications.

Part I: Background and Economic Impact

Epidemics Occur Very Frequently Burden of epidemics: illustrations

Epidemic events* globally, 2011 - 2017**: A total of 1,307 epidemic events, in 172 countries

* Analysis excluded Poliomyelitis. The following epidemic and pandemic diseases were analysed: Avian Influenza A(H5N1), A(H7N9), A(H7N6) A(H10N8), A(H3N2), A(H5N6), A(H9N2), Chikungunya, Cholera, Crimean-Congo haemorrhagic fever, Ebola virus disease, Lassa fever, Marburg virus disease, Meningitis, MERS-CoV, Monkeypox, Nodding syndrome, Nipah virus infection, Plague, Rift Valley fever, Shigellosis, Typhoid fever, Viral haemorrhagic fever, West Nile fever, Yellow fever, Zika virus disease caused more than 1 epidemic event by year in a country, it was only counted once for the year it occurred in that country. Includes cases imported or locally transmitted.

** WHO/IHM data as of 12 January 2018 (note: 2017 data is not complete) <u>https://www.who.int/emergencies/diseases/managing-epidemics-interactive.pdf</u>

Part II: When & How of the Recovery

Objectives

- Minimize cases and deaths:
 - Shelter in place (quarantines): Bunker mentality.
 - Social distancing.
 - Contact tracing.
 - Travel bans.
 - Protecting the healthcare system.
- Minimize economic damage:
 - Definition of "essential" sectors.
 - Monetary measures.
 - Fiscal measures: relief packages.

Democracies vs. Dictatorships

One bug, two systems

Deaths from epidemics v GDP per person, by type of government 1960-2020

Deaths per 1m people (log scale)

Restarting the Economy

- *When*: Can't wait until everyone is tested or until the pandemic "ends" thanks to herd immunity or a vaccine.
- *How*: That's the harder question.
- Considerations:
 - Higher-risk populations.
 - Opening schools.
 - Making transportation safe.
 - Making workplaces safe.
 - Linkages along the supply chain.
 - Lifting travel bans.

Deaths by Age

U.S. deaths involving Covid-19, by age group

https://www.wsj.com/articles/reopening-the-u-s-economy-even-if-the-pandemic-endures-11587740529. Data as of April 23

Overall Mortality

- Deaths / Cases = 54K / 956K = 5.6%
- *#* of cases is grossly underestimated:
 - Study in Santa Clara County, CA. Infection rates were 28 to 55 times greater than the confirmed # of cases.
 - Study in Los Angeles County: 28 to 55 times higher.
- Thus, mortality rates are very low, at least so far.

Travel Bans

- Only effective before a pandemic has spread.
- They would need to be complete and instantaneous.
- After 9/11, the flight ban resulted in a delayed and prolonged flu season.
- International travel bans create a false sense of security.

Reductions in Air Traffic

Source: Digitized from Figure 2a in Flahault, Antoine, Elisabeta Vergu, Laurent Coudeville, and Rebecca F. Grais. "Strategies for Containing a Global Influenza Pandemic." Vaccine 24, no. 44-46 (November 10, 2006): 6751–55.

Notes: Univariate sensitivity analysis. Outbreak starts in Hong Kong. "Average epidemic status delay" refers to the average number of additional days for the attack rate to reach epidemic threshold (1/100,000) in a city as a result of travel reductions. Overall attack rate refers to the percentage of infected persons in the 52 cities analyzed.

https://www.cato.org/blog/research-provides-no-basis-pandemic-travel-bans

Temptations

- Government orchestration of the recovery.
- Protectionism.
- Anti-immigration measures.
- Universal basic income.

Part III: Longer-Term Implications

Macro: Economic Implications

- Populism and protectionism.
- Government indebtedness.
- Monetary abnormality.
- High unemployment.
- Economic inequality.

Macro: Social Implications

- Technology use.
- Declining fertility.
- Senior citizens: higher mortality and negative wealth effect.
- Gender:
 - Women take fewer risks and have better antiviral defenses to begin with.
 - Household division of labor.
- Effects by race and ethnicity.

Micro: Companies

- New work arrangements.
- More resilient supply chains.
- Renewed push towards automation.
- Cash, cash, cash.

Micro: Workers

- Flight to more secure industries, jobs, and occupations.
- Shift in preferences about remote work.
- Displacement by automation.

Micro: Consumer Preferences

- Online shopping.
- Physical and mental wellbeing?
- Quality of life?
- Quality time?
- Safety?
- More space in the home?
- Small pleasures—the simple things in life?
- Introspection and soul-searching?

In Conclusion

- Need to avoid long-term economic damage.
- Finding a balance between saving lives and saving livelihoods.
- Huge macro transformations in the economy and the society.
- Micro shifts in behavior by companies, workers, and consumers.
- Preexisting trends:
 - A few will be derailed.
 - Most will be accelerated.

Session Narrative Summary

What are the economic and social implications of COVID-19 in the short and in the long run? How will companies, workers, and consumers change their behavior? Is it possible to find a new balance between saving lives and saving livelihoods? This presentation makes use of the best available research to illuminate public policy debates and anticipate the big shifts that the pandemic will bring to the economy and the society.
